

All-Electric Belt-Drive Cabinets

These all electric models are the perfect solution for indoor cleaning where combustible fuel or harmful fumes are not allowed. Pressurized water is heated inside a stainless steel coil as it passes through an 80-gallon tank filled with water, providing efficient heat transfer and instant hot water at the pull of the trigger.

- *Electric-powered heat*
- *No open flame or combustible fuel*
- *Ideal for indoor cleaning*
- *Auto start/stop*
- *Stainless steel coil*
- *Belt-drive pump with 7-year warranty*

- Water inside the heat exchanger is heated using nine 4500W heating elements (40.5KW total) protected by an alloy sheath. The heating elements do not come in contact with the pressurized water, reducing scale build-up and extending service life
- The 138,000 BTU heating module delivers hot water on demand without an open flame
- An oil layer at the surface of the water tank prevents heat loss and reduces evaporation. Low-water protection prevents damage to the heating elements if the water level in the tank runs low
- Our industrial-grade tri-plunger, belt drive Kärcher high pressure pump has a forged brass head and ceramic pistons and can accept water up to 180°F
